

配置全局数据源

The screenshot shows the Eclipse IDE interface. The top panel displays the file explorer for the project `D:\Workspaces\MyEclipse2015\Servers\MyEclipse Tomcat v7.0-config`. The file `server.xml` is selected and highlighted with a red box. The bottom panel shows the XML content of `server.xml`. The `<GlobalNamingResources>` element is highlighted with a red box, and the `<Resource>` element inside it is also highlighted with a red box. The XML content is as follows:

```
<!-- Global JNDI resources
Documentation at /docs/jndi-resources-howto.html
-->
<GlobalNamingResources>
  <!-- Editable user database that can also be used by
  UserDatabaseRealm to authenticate users
  -->
  <Resource auth="Container" description="User database t
</GlobalNamingResources>

<!-- A "Service" is a collection of one or more "Connecto
a single "Container" Note: A "Service" is not itsel
```

以上，在Tomcat的conf中的server.xml文件中，找到`<GlobalNamingResources>`元素，在其中进行配置
